

Joseph Shacat

Joseph, a senior advisor for sustainable construction at ERG, has nearly 20 years of experience in sustainability and environmental compliance focused primarily on the construction sector. He has worked in a variety of roles including industry, trade association, agency, and consultant, providing a broad range of perspectives that inform his work. Joseph is a leading expert in embodied carbon and environmental product declarations (EPDs). He is well versed in quantifying the environmental impacts associated with the use of recycled materials in construction products in support of a circular economy, including life-cycle based approaches and evaluating potential contaminants and human health impacts associated with recycled materials.
