

MYCOCYCLE

Joanne Rodriguez is Founder & CEO of Mycocyple, Inc., which uses mushrooms to remove toxins from waste. Recognized for her innovation by Forbes Magazine, FastCompany, and the EPA she is shifting the paradigm on how we view waste: as a reusable resource, not a burden.

Prior to founding Mycocyple, she was a sustainability leader in the construction products manufacturing industry. She is a specialist in technologies like the circular economy, biomimicry and green chemistry.

A frequent national speaker, Rodriguez had the honor of serving on a panel for Hillary Clinton's "No Ceilings Initiative" representing women in construction. She has participated in convenings at the United Nations, Clinton Global Initiative, and GreenBiz while lending her technical expertise to the US Green Building Council and the Environmental Protection Agency.
