

*Scott Hacker, PhD*

Scott Hacker is a Technical Manager in the Advanced Materials technology group at Honeywell. In his role he is responsible for developing new products for customers world-wide based on synthetic, low molecular weight polyethylene and polypropylene polymers, copolymers and functionalized derivatives of them.

Dr. Hacker has worked 34 years at Honeywell (formerly AlliedSignal) within the technology organization in various capacities. He has worked on projects for various Performance Materials and Technology business groups – including Nylon carpeting, PET tire cord and Spectra™ fiber. The last 10 years his group has been focused on the development of additives to serve the asphalt industry.

Dr. Hacker holds 8 patent families in the area of polymer modified asphalts and hot mixes. He has spoken at three international conferences.
